PALABRAS CLAVE / KEY WORDS

Distribución, *Vanessa virginiensis*, Nymphalidae, Galicia

Widespread, *Vanessa virginiensis*, Nymphalidae, Galicia

Vanessa virginiensis (Drury, 1773) é un potente migrador eminentemente de orixe Neartica, asentado en varias colonias da Macaronesia (VIEIRA, 2017) e ben establecida no Portugal continental (MARAVALHAS, 2003). Citáronse varias colonias no interior da Península Ibérica (GARCÍA-BARROS et al., 2004, GARCÍA VILLANUEVA, 2010, etc.) e localizouse en varias localidades de Galicia, incluído o acto de ovoposición (FERNÁNDEZ VIDAL, 2013).

No outono de 2017 referíronse diversas presenzas desta especie en Galicia por diversos medios de comunicación electrónica. Coa intención de evitar a perda do menor número de datos posibles, solicitouse por eses mesmos medios a colaboración para rexistrar e constatar esta presenza nun medio máis perdurable no tempo e minimizar a perda desta información.

Os datos están apoiados por fotografías ou no seu defecto por persoas con suficiente fiabilidade para validar os datos.

Recopilaróense 25 citas correspondentes a 16 cuadrículas UTM 10x10 km distintas (taboa 1) e localizadas

Vanessa virginiensis (Drury, 1773) is a powerful migrant from Neartic region, settled in several colonies of Macaronesia (VIEIRA, 2017) and well established in mainland Portugal (MARAVALHAS, 2003). Several colonies were cited in the Iberian Peninsula inland (GARCÍA-BARROS et al., 2004, GARCÍA VILLANUEVA, 2010, etc.) and it has been located in several localities of Galicia, including the ovoposition act (FERNÁNDEZ VIDAL, 2013).

In the autumn of 2017, different presences of this species were referred in Galicia by various means of electronic communication. With the intention of avoiding the loss of the smallest number of possible data, the collaboration was requested through these same electronic means in order to register this presence in a more durable register, thus minimizing the loss of information.

The data is supported by photographs or, failing that, by people with sufficient reliability to validate the data.

25 records were collected corresponding to 16 UTM 10x10 km grids (table 1), located in all the Galician

en todas as provincias galegas agás Lugo. As citas incorpóranse ó programa ESENGA e publicanse na taboa nº1 con precisión de 1x1 km. Os datos xeorreferenciáronse baixo o Datum ETRS89 e represéntanse no mapa nº1.

O rango de avistamento abrangue dende 31/09/17 ata 19/11/17 e recóllese unha cita do ano 2016. Non se representa no mapa unha cita no polígono de Pocomaco (A Coruña) ó aparecer incrustada nun vehículo e ignorar a posible orixe deste exemplar.

AGRADECIMENTOS

A Alejandro A. Lázaro polo valioso aporte dun número importante de datos e a súa colaboración.

provinces except Lugo. The registers were incorporated into the ESENGA program and published in table nº1 with a precision of 1x1 km. The data was geo-referenced under Datum ETRS89 and are represented on map No. 1.

The range of sightings covers from 13/9/17 to 11/19/17 and a register of year 2016 has also been added. A register from Pocomaco (A Coruña) is not shown on the map because this specimen appeared embedded in a car and the possible origin of this specimen is ignored.

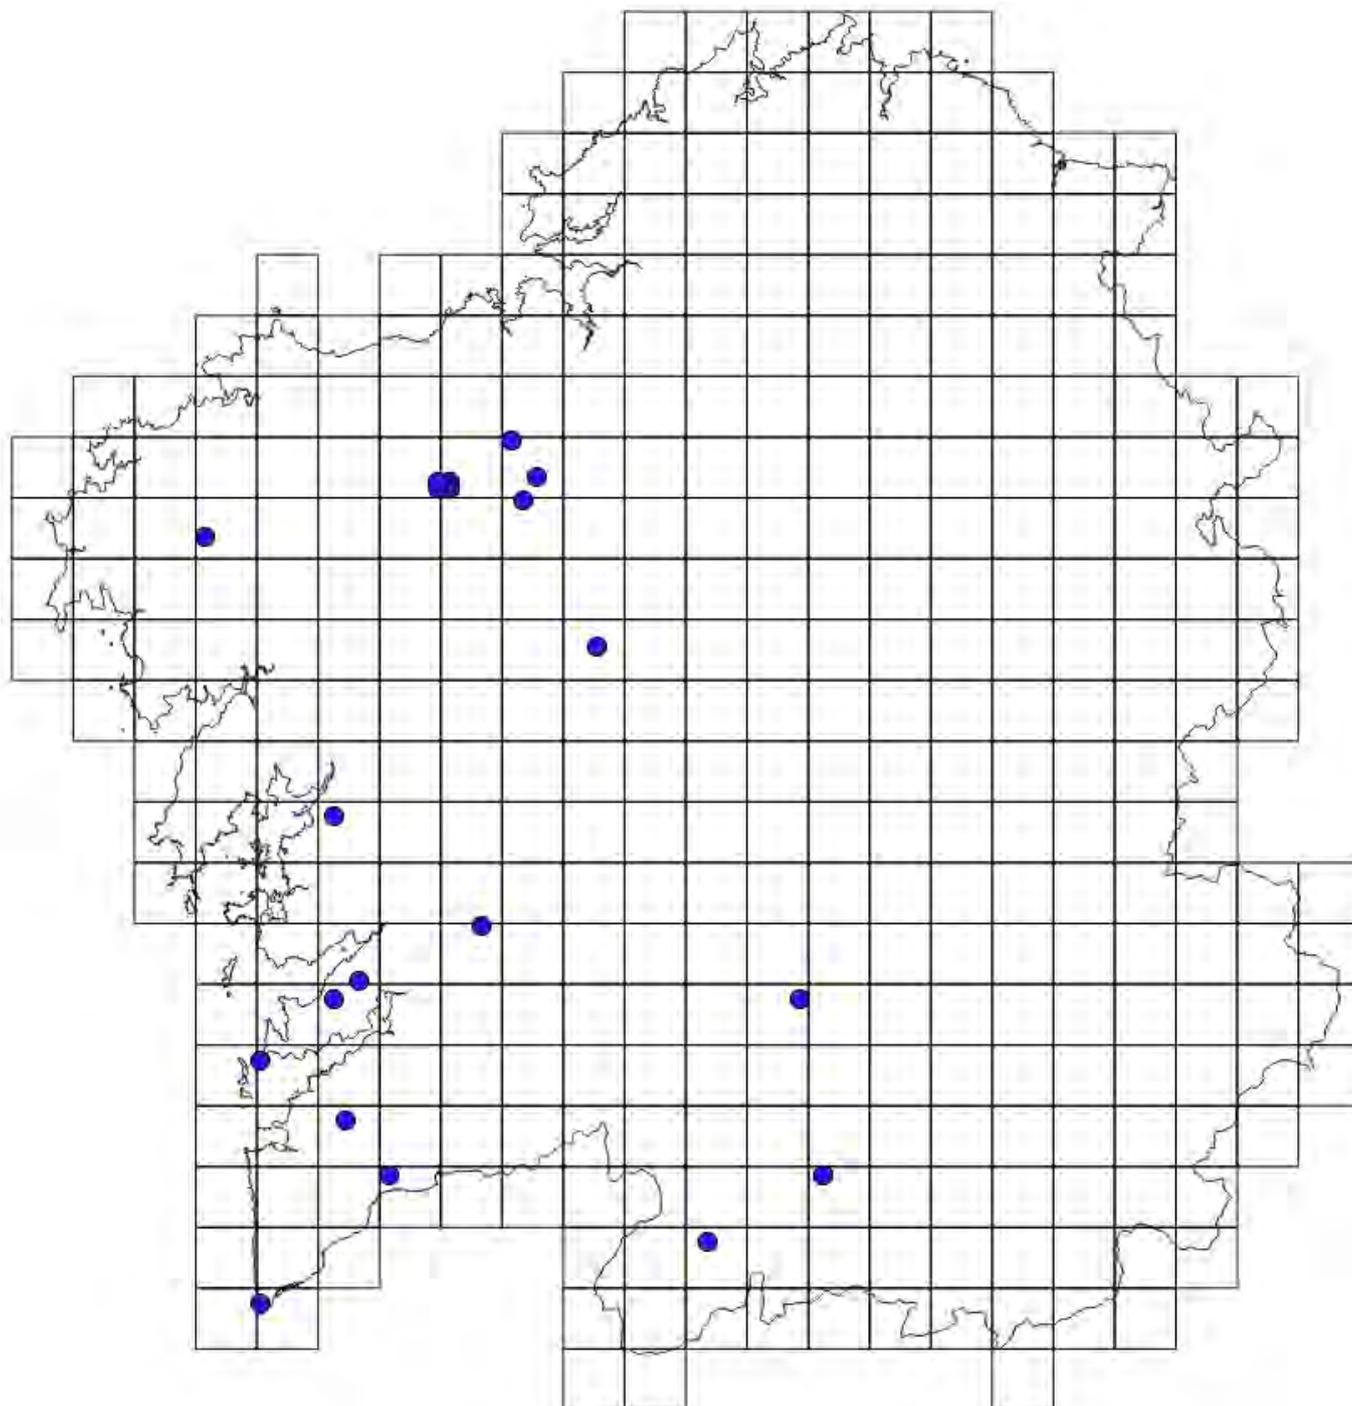

ACKNOWLEDGMENTS

To Alejandro A. Lázaro for his valuable contribution with an important number of data and for his collaboration.
